

Legend  Large decrease  Small decrease  No change  Small increase  Large increase

These vegetation cover (NDVI) time series maps show the changes in vegetation month-on-month compared to the monthly Long-Term Mean (LTM) for 2001-2017. The multiple orange/red markings indicates reduced vegetation cover compared to LTM while the greenish areas indicates vegetation improvements compared to LTM. Areas in predominantly yellow color indicate that there is relatively no much change of vegetation compared to the long-term mean.
